Professional Summary

Full Stack Developer with 4.5+ years of experience building scalable enterprise applications using C#, .NET Core, Angular, React, SQL Server, and Azure. Experienced in developing RESTful APIs, cloud-based solutions, system integrations, and performance optimizations using Azure Services, SignalR, and Redis. Delivered production-ready solutions across Tax & Compliance, Shipping & Logistics, and Manufacturing in Agile/Scrum environments.

Skills

Programming Languages: C#, Java, Python
Databases: SQL Server, PostgreSQL
Frameworks: .NET, .NET Core, ASP.NET Core, Entity Framework Core, Angular, jQuery, Node.js, SignalR
Frontend: HTML5, CSS3, JavaScript, TypeScript
Cloud & Other Technologies: Microsoft Azure, Azure Functions, Azure Blob Storage, Azure Service Bus, RESTful APIs
Tools & Technologies: Visual Studio, VS Code, Postman, Docker, Kubernetes, Azure DevOps, Redis Cache, TFS, Git, Figma, Jira, SSMS, SSIS, MCP, LLM, GenAI

Experience

Wolters Kluwer **Pune**
Product Software Engineer (.NET, Angular, React, Azure) *Oct 2025 – Present*

- Developed and maintained **enterprise applications using C#, .NET, Angular, and Azure**, delivering scalable and production-ready features within an **Agile/Scrum environment**.
- Designed and integrated **RESTful APIs and third-party services**, implementing secure authentication, validation, exception handling, and reliable service-to-service communication.
- Developed and integrated **Azure services and SignalR** to implement a **decoupled, asynchronous architecture** for application communication, data processing, and real-time updates, enhancing scalability, reliability, and performance.
- Contributed to **code reviews and technical discussions**, identifying **potential improvements** and ensuring adherence to established **development standards**.
- Collaborated with cross-functional teams under **Agile/Scrum methodology** to analyze requirements, troubleshoot issues, and deliver production-ready solutions.

Neosoft **Mumbai**
Senior Full Stack Developer (.NET, Angular) *Mar 2025 – Sep 2025*

- Engineered highly scalable backend systems using **.NET Core** and **C#**, increasing system throughput and reducing API response latency by **60%**.
- Designed and implemented optimized **SQL Server** database schemas and executed seamless database migrations.
- Applied **OOP principles** and clean code practices to ensure maintainability, scalability, and robustness in the development process.
- Diagnosed and resolved application issues across backend and frontend components, improving system stability and ensuring reliable application operation.
- Developed responsive front-end components in Angular, integrating REST APIs to deliver seamless and dynamic user experiences.

Birlasoft **Pune**
Full Stack Developer (.NET, React, jQuery) *Feb 2022 – Feb 2025*

- Developed and deployed **RESTful APIs** using **C#** and **.NET Core**, enabling seamless integration with front-end systems and reducing API response time.
- Implemented the **CQRS** pattern to separate read/write operations, improving scalability and reducing database query load.
- Effectively managed data handling by leveraging **SQL Server** database, ensuring efficient storage and retrieval of information.
- Collaborated with UI/UX designers, product managers, and other stakeholders to ensure that the application met user needs and business requirements.

Projects

MTD for Income Tax | .NET, C#, SQL Server, Angular, Azure **Oct 2025 – Present**

- Developed and maintained features for Wolters Kluwer's **MTD for Income Tax** platform, supporting UK tax-compliance workflows and integration with **HMRC Government APIs**.
- Developed a reusable **Node.js library** that securely communicates with the **Global Application (CCH Central)** using **AAA authentication**, integrates with REST APIs, and enables internal applications to perform job and task management operations, reducing integration effort by **60%** through a standardized and reusable interface.
- Developed and integrated **Azure Functions and SignalR** to communicate with **HMRC Government APIs**, process asynchronous responses, and securely transmit real-time updates between external government services and internal applications, improving response handling efficiency by **30%**.
- Integrated **Azure Blob Storage** to replace the existing database-based file upload mechanism, improving file upload performance and storage scalability, while reducing database dependency and achieving approximately **40%** faster file upload and retrieval.
- Integrated **Azure Service Bus** to implement asynchronous, event-driven communication using queues and message-based processing, reducing synchronous API dependencies and improving background processing throughput by **30%** through reliable message handling and retry mechanisms.
- Implemented **Clean Architecture** with clear separation of API, Application, Domain, and Infrastructure layers, improving code maintainability, testability, scalability, and separation of concerns.

MNR Portal | .NET, C#, SQL Server, Angular **Mar 2025 – Sep 2025**

- Developed and migrated key features of the MNR module from legacy systems to **Angular 18** and **.NET Core**, increasing performance, scalability, and maintainability by **60%** for a leading container management client in the shipping industry.
- Designed and implemented file upload and retrieval functionality using **Azure Blob Storage**, integrating Azure services to enable secure, scalable cloud-based storage.
- Applied the **Fluent Validation** library to enforce robust, server-side data validation, enhancing data integrity and reducing input errors.
- Integrated **Redis Cache** to optimize API performance, reducing average response times by **50%** and improving responsiveness in high-load production environments.
- Effectively managed data handling by leveraging **SQL Server** database, ensuring efficient storage and retrieval of information.

Packing Application | .NET, C#, SQL Server **Apr 2023 – Feb 2025**

- Developed, deployed, and maintained a Packing Application that manages product packaging on the Assembly Line using **.NET**, ensuring efficiency and accuracy until final packing.
- Designed and implemented **RESTful APIs** using **C#** and **.NET** for QR Code Management, streamlining QR code formatting and scanning for parts, resulting in a **70%** increase in scanning efficiency.
- Designed and implemented data integration packages using **SSIS**, leveraging transformations such as Derived Columns, Expressions, and Lookups to ensure seamless data transformation and accuracy.
- Effectively managed data handling by leveraging SQL Server database, ensuring efficient storage and retrieval of information.

Digital Police System | .NET **Oct 2022 – Apr 2023**

- Developed a platform using **ASP.NET Core** and **Entity Framework Core** for users to file complaints by region and category and for police officers to manage complaints specific to their allocated stations.
- Implemented **role-based access control** and **user authentication** with **ASP.NET Core Identity**, enabling users to track, comment on, and withdraw complaints, while allowing police officers to approve, reject, or defer complaints and provide comments to gather more information.
- Utilized **Entity Framework Core** for ORM-based interactions and **SQL Server** for reliable data storage, ensuring high availability and data consistency.

Education

Priyadarshini College of Engineering, Nagpur **2018 – 2022**
Bachelor of Engineering in Computer Science and Engineering *CGPA: 9.12/10.0*

Certificates and Achievements

Nov 2023: Budding Star | Birlasoft
Apr 2022: Rising Star | Birlasoft
Apr 2021: Web Development | Dell Technologies
